PROFILE

Senior Software Engineer with 5 years of experience building backend, platform, and developer productivity systems at Akamai Technologies. Experienced in designing Python services and automation, large scale data pipelines, Kubernetes based infrastructure, and production observability systems. Proven track record of reducing operational effort and building internal platforms used across SRE, DevOps, and engineering teams.

EXPERIENCE

Senior Software Engineer | Akamai Technologies

Dec 2024 - Present

- Designed and implemented a full-stack emergency certificate-rotation platform with Django/Python, PostgreSQL, and Angular to automate CA-key incident remediation across 1K–20K certificates. Built backend orchestration and REST API integrations with CPS services, persisted intermediate workflow state in PostgreSQL, and monitored certificate lifecycle progress through CPS data stores, enabling the UI to provide end-to-end visibility into long-running rotation operations.
- Built and owned an internal developer platform integrating engineering, observability, data, and anomaly-analysis systems through backend APIs, with OAuth2/mTLS security and retrieval capabilities, supporting 20 active users and 100K requests/month.
- Automated a weekly production deployment workflow using Prefect by parsing Confluence deployment-plan pages to determine required artifacts, monitoring checks, and Jenkins validation jobs; orchestrated file retrieval from Bitbucket and Perforce, deployment to Akamai Ghost machines, execution of three monitoring and anomaly-detection systems, and post-deployment Jenkins verification against deployed hosts, reducing end-to-end deployment time from 3 hours to 9 minutes.

Software Engineer II | Akamai Technologies

Apr 2023 - Dec 2024

- Contributed to Scala/Spark ETL and aggregation for Akamai server logs and a Databricks-to-Linode migration on a 50-node Linode Kubernetes cluster (40 ETL nodes, 10 aggregation nodes).
- Developed high-throughput log analysis and anomaly-detection automation producing 200K aggregated rows every 5 minutes across 70K active CP codes (200K total), used by DevOps and SRE.

Software Engineer | Akamai Technologies

Jul 2021 - Apr 2023

- Developed concurrent Python automation-library and asynchronous data-gathering tools for monitoring workflows.
- Automated monitoring and anomaly detection of 8 DevOps dashboards spanning 1,200 metrics and 12,000 metric rows; enabled SRE and CPS alerting that surfaced deployment restart counts within 15 minutes versus 1-6 hours of manual verification.

TECHNICAL SKILLS

Languages:	Python, SQL, Scala, Java, Go, C++
Frontend:	Angular, React, JavaScript, HTML, CSS
Backend & Platform:	Django, FastAPI, REST APIs, Kubernetes, Docker/Podman, OAuth2, mTLS, CI/CD
Data & Observability:	Spark, ClickHouse, PostgreSQL, Airflow, Prefect, Grafana, Superset
AI / Developer Tooling:	MCP, FastMCP, ChromaDB, RAG, OpenRouter APIs
Cloud:	AWS, Azure, Linode

EDUCATION & RECOGNITION

PES University, Bengaluru

2017 - 2021

B.Tech in Computer Science and Engineering; GPA: 8.94/10

Recognition: Recipient of the Central Sector and CNR Rao Merit Scholarships; qualified for SnackDown 2019 Online-1.
