PROFILE

Senior Software Engineer at Akamai Technologies with 5 years building Python backend services, APIs, and developer-facing tooling for production platforms. Owned MCP server implementation and the Python ECR certificate-rotation system for CPS. Strong fit for backend/platform teams that value reliable services, reusable tooling, observability, and pragmatic system design.

TECHNICAL SKILLS

Languages:	Python, SQL, Java, Go familiarity, C++ project experience
Backend:	REST APIs, microservices concepts, async processing, internal clients/libraries
Platform:	Kubernetes, Docker/Podman, Azure, Linode, Jenkins, Splunk, CI/CD
Data/observability:	Apache Spark exposure, ClickHouse, Cassandra, Grafana, Superset, anomaly detection

EXPERIENCE

Senior Software Engineer | Akamai Technologies

Dec 2024 – Present

- **CPS certificate workflows:** Designed and implemented the Python-based ECR (Emergency Certificate Rotation) system for CPS, including CPS API integration, validation gates, safety checks, and operational automation for vulnerable CA-key scenarios.
- **Developer workflow automation:** Owned, designed, and implemented Python/backend automation for internal engineering workflows, reducing weekly manual toil by **95%** based on documented production impact.
- **MCP server ownership:** Owned the design and implementation of Akamai's internal MCP server end-to-end, and built the customer-facing MCP server implementation (beta tech preview), including OAuth2 authentication, per-user request tracing and audit logging, user-level monitoring, and Edgegrid API integration.
- **Engineering practices:** Participated in code reviews and maintainability improvements for backend/platform automation with production reliability concerns.

Software Engineer II | Akamai Technologies

Apr 2023 – Dec 2024

- **Data/ETL contribution:** Contributed to Scala/Spark ETL and aggregation workflows processing large-scale Akamai server logs; supported migration-related work from Azure Databricks toward Linode Kubernetes.
- **Low-latency log analysis:** Built a high-throughput pipeline analyzing millions of log rows to dynamically surface the top 5% CP codes across Akamai services, with hourly/daily metric aggregation and automated anomaly probable-cause reporting.
- **Platform migration work:** Helped adapt big-data processing workflows to Kubernetes-based execution with attention to maintainability and operational reliability.

Software Engineer | Akamai Technologies

Jul 2021 – Apr 2023

- **Automation library:** Developed a concurrent Python automation library with reusable statistical/model abstractions; adoption reduced manual monitoring effort by **75%**.
- **Data interfaces:** Built interfaces for Grafana and databases including ClickHouse and modified Cassandra to support real-time network metric baselines.
- **Async processing:** Implemented asynchronous data-gathering tools for low-latency external applications and database queries.

Internship | Akamai Technologies

Jan 2021 – Jun 2021

- Developed command-line tools for preprocessing performance data and reporting key parameters for monitoring workflows.

EDUCATION & ACHIEVEMENTS

PES University, Bangalore

2017 – 2021

B.Tech in Computer Science and Engineering

GPA: 8.94 / 10

- Recipient of performance awards/RsUs for automation and operational-efficiency impact. Qualified CodeChef Snack-Down 2019 (Online Round 1). Recipient of the Central Sector Scholarship and the CNR Rao Merit Scholarship (top 20% of CS department).
